

ACTIVITY 12

AI Portfolio Prompt Log

Building a personal portfolio website through step-by-step prompt refinement

NAME	SRN	COURSE	SEMESTER
SAMIULLA M	R25EJ133	B.Tech CSE	3rd Semester

1. Portfolio Brief

I am SAMIULLA M, a 3rd-semester B.Tech Computer Science and Engineering student at REVA University, Bengaluru. I am building my programming, problem-solving, and project skills through coursework, coding practice, and my work on GitHub.

My technical skills include C, C++, Python, Git, GitHub, and basic data structures and algorithms. I am improving my problem-solving skills through LeetCode and HackerRank and maintaining my coding work on GitHub.

The goal of this activity was to create a clean, responsive personal portfolio website using AI prompts, and to improve it step by step without adding any information I did not provide.

I am SAMIULLA M, a 3rd-semester B.Tech Computer Science and Engineering student at REVA University, Bengaluru. I am building my programming, problem-solving, and project skills through coursework, coding practice, and my work on GitHub.

My technical skills include C, C++, Python, Git, GitHub, and basic data structures and algorithms. I am improving my problem-solving skills through LeetCode and HackerRank and maintaining my coding work on GitHub.

The goal of this activity was to create a clean, responsive personal portfolio website using AI prompts, and to improve it step by step without adding any information I did not provide.

2. Initial Portfolio Generation Prompt

RESULT

AI generated the first version of the personal portfolio website containing Home, About, Skills, Projects, Coding Practice, Career Goals, and Contact sections. The website included a responsive layout, navigation menu, and student-focused content.

3. Follow-up Prompt 1: Content Improvement

WHAT CHANGED

The About section was shortened and made more professional. The Projects section was improved with clearer descriptions and GitHub links. The Skills section was also organized into clearer categories, while unnecessary or unsupported information was removed.

4. Follow-up Prompt 2: Navigation and Final Review

WHAT CHANGED

Navigation was improved so that the links correctly connect to the relevant sections. The website was made more responsive for different screen sizes. GitHub and other important links were made more visible. Content accuracy, spelling, consistency, spacing, and overall presentation were also improved.

5. Prompt Log

6. Final Portfolio and Publication

The final portfolio was generated as HTML, CSS, and JavaScript code. It can be published for free using GitHub Pages by uploading the files to a GitHub repository and enabling Pages in the repository settings.

7. Reflection

The most useful part of this activity was learning how a detailed prompt can produce a much better portfolio than a vague request. I learned that giving the AI specific information about my education, skills, coding practice, and career goals helps it generate more relevant content.

The refinement prompts were also useful because they allowed me to improve the portfolio step by step instead of trying to create the final version in one attempt. I learned how prompts can be used to improve the About section, project descriptions, navigation, responsiveness, and overall presentation.

NAME	SRN	COURSE	SEMESTER
SAMIULLA M	R25EJ133	B.Tech CSE	3rd Semester
Create a professional personal portfolio website for me as a second-year B.Tech Computer Science and Engineering student. My details are: Name: SAMIULLA M SRN: R25EJ133 Course: B.Tech CSE University: REVA University, Bengaluru Semester: 3rd Semester I want the portfolio to showcase my academic journey, programming skills, projects, coding practice, and career goals. Create the portfolio with the following sections: Home About Me Skills Projects Coding Practice Career Goals Contact My technical skills include C, C++, Python, Git, GitHub, and basic data structures and algorithms. I am currently improving my problem-solving skills through LeetCode and HackerRank and maintaining my coding work on GitHub. The design should be modern, clean, professional, responsive, and suitable for an engineering student's portfolio. Use simple and professional language. Do not invent achievements, internships, certifications, projects, or experience that I have not provided. Include navigation between sections and make the website easy to read on both desktop and mobile devices. Generate the complete HTML, CSS, and JavaScript code required for the portfolio.			
Improve the portfolio website you created earlier. Make the About Me section shorter, clearer, and more professional while keeping it suitable for a B.Tech CSE student. Improve the Projects section by making each project description more specific and easy to understand. Include GitHub links where applicable, but do not create fake links or invent projects. Improve the Skills section so that programming languages, tools, and technical areas are clearly separated. Keep the content accurate to the information I provided. Do not add fake internships, certifications, job experience, awards, or achievements. Keep the existing clean and modern design.			

Further improve my portfolio website without changing the main purpose of the website.
 Make the navigation easier to use and ensure that every navigation link correctly moves to the corresponding section.
 Improve the responsive design so that the website works properly on desktop, tablet, and mobile screens.
 Make GitHub and other important links clearly visible and easy to identify.
 Check the content for accuracy, spelling, consistency, and professional wording.
 Improve the visual hierarchy using suitable headings, spacing, buttons, and section layouts while keeping the website simple and professional.
 Do not add any information that I did not provide.
 Make sure the final portfolio represents me accurately as a B.Tech CSE student building my programming, problem-solving, and project skills.

Prompt	Purpose	What Changed
Initial Portfolio Generation	Generate the first version of the portfolio.	Created the first portfolio website with Home, About Me, Skills, Projects, Coding Practice, Career Goals and Contact sections, a responsive layout and a navigation menu.
Content and Structure Refinement	Improve the About, Projects and Skills sections.	Shortened and clarified the About section, made project descriptions more specific with GitHub links, and organised skills into clear categories. Unsupported information was removed.
Navigation and Final Review	Improve navigation, responsiveness and overall polish.	Fixed navigation links, improved the layout for desktop, tablet and mobile, made GitHub links more visible, and checked accuracy, spelling and consistency.
