
PERSONAL INFORMATION

Name: SAMIULLA M

Course: B.Tech Computer Science and Engineering

Semester: 3rd Semester

University: REVA University, Bengaluru

Role:

Computer Science Student | Aspiring Software Developer

ABOUT ME

I am a Computer Science and Engineering student developing my programming and problem-solving skills through academic work, coding practice, and practical projects.

I am particularly interested in programming, data structures, problem solving, software development, and learning how real-world applications are built.

I use platforms such as GitHub, LeetCode, and HackerRank to practice, document my progress, and build a stronger technical foundation.

My current goal is to become a capable software developer, gain practical project and internship experience, and prepare myself for future software development opportunities.

MY PROJECTS AND LEARNING WORK

Create a visually attractive Projects section containing the following REAL work:

1. Line Editor Project

Description:

A programming project that helped me apply programming concepts to build a practical line-editing application. It strengthened my understanding of program logic, functions, data handling, and problem solving.

Add a GitHub button using this placeholder:

[\[naikodisamiulla100-coder/line-editor\]](#)

2. LeetCode Solutions

Description:

A structured GitHub repository containing my LeetCode practice. I organize solutions by topics such as Arrays & Strings, Basic Algorithms, Stacks, and Linked Lists. I also document approaches and complexity to improve my understanding.

GitHub:

[\[naikodisamiulla100-coder/leetcode-solutions: solving leetcode questions\]](#)

3. HackerRank Practice

Description:

I use HackerRank to practice programming and problem-solving. This helps me strengthen my fundamentals and improve my ability to solve programming problems consistently.

HackerRank:

[[naikodisamiulla100-coder/Hackerrank-solutions](#)]

4. GitHub / Hello World

Description:

One of my early GitHub activities where I learned the basics of creating repositories, organizing programming files, making commits, and maintaining code using GitHub.

GitHub:

[[naikodisamiulla100-coder/hello-world-c: My first C programming project for Portfolio Building.](#)]

5. GitLens & Live Share Collaboration

Description:

An academic pair-programming activity where I explored collaborative development using GitLens and Live Share. This introduced me to working with another student on shared code and understanding Git-based collaboration.

Repository:

[LIVE_SHARE_GITHUB_LINK]

TECHNICAL SKILLS

Display these as modern skill cards or tags:

C

C++

Python

Data Structures

Problem Solving

Git

GitHub

SQL

VS Code

Basic Web Development

Do not display skill percentages such as "90%" because I have not provided any verified skill ratings.

CODING & DEVELOPMENT

Create a section explaining that I am building my skills through:

- LeetCode problem solving
- HackerRank practice
- GitHub projects
- Academic programming projects
- Git and GitHub version control
- Data structures and algorithms practice

MY CURRENT FOCUS

Create a "Currently Learning" or "What I'm Working On" section.

Include:

- Strengthening C and C++ fundamentals
- Improving Python programming
- Learning data structures and algorithms
- Practicing coding problems
- Building projects
- Improving GitHub portfolio
- Preparing for internships and software development placements

CAREER GOAL

Create a short professional section explaining that my long-term goal is to become a strong software developer by continuously improving my programming fundamentals, problem-solving ability, project experience, and understanding of software development practices.

CONTACT

Create a clean contact section containing:

GitHub:

[[naikodisamiulla100-coder](#)]

LinkedIn:

[[SAMI M | LinkedIn](#)]

Email:

[naikodisamiulla100@gmail.com]

Do not invent any contact information.

WEBSITE DESIGN

I want the website to look like a modern developer portfolio rather than a generic college assignment.

Design style:

- **Modern**
- **Minimal**
- **Professional**
- **Clean**
- **Developer-focused**
- **Slightly futuristic**
- **Good spacing**
- **Strong typography**
- **Smooth animations**
- **Professional dark theme with subtle accent colours**
- **Avoid excessive gradients**
- **Avoid unnecessary animations**
- **Avoid stock images**

Create:

1. A fixed navigation bar

- **Home**
- **About**
- **Projects**
- **Skills**
- **Learning**
- **Contact**

2. Hero section

- **"Hi, I'm SAMIULLA M"**

- "Computer Science Student & Aspiring Software Developer"
- Short introduction
- View Projects button
- GitHub button

3. About section

4. Projects section with attractive project cards

5. Skills section

6. Currently Learning section

7. Career Goal section

8. Contact section

9. Footer

INTERACTION & USER EXPERIENCE

The website should:

- Work on desktop and mobile
- Have responsive navigation
- Have smooth scrolling

- Have subtle hover effects
- Have readable typography
- Have accessible buttons
- Have clear section spacing
- Load quickly
- Avoid unnecessary libraries

IMPORTANT ACCURACY RULES

Do not invent:

- Certifications
- Internships
- Job experience
- Awards
- Company experience
- GitHub stars
- LeetCode rankings
- HackerRank rankings
- Programming skill percentages
- Fake statistics
- Fake achievements

Use placeholders for links that I have not supplied.

The content should sound like a genuine 2nd/3rd-year CSE student rather than an experienced professional.

OUTPUT REQUIREMENT

Generate the complete portfolio as a single self-contained index.html file.

Do not require a backend.

Do not require a database.

Do not require npm or any build tools.

The page must be ready to upload directly to a GitHub Pages repository.

Before generating the final HTML, make sure every section above is represented accurately.
