

Activity 12 — Portfolio Brief

Name: SAMIULLA M | Course: B.Tech CSE (Portfolio Building, B25CS0311) | Semester: 3rd

GitHub username: [naikodisamiulla100-coder](https://github.com/naikodisamiulla100-coder) | Portfolio URL: <https://github.com/naikodisamiulla100-coder>.

1. Who I am

I am SAMIULLA M, a third-semester B.Tech Computer Science and Engineering student. I am building the foundations of a software career: a working development setup, version control with Git and GitHub, habits for collaborating with other developers, and regular problem-solving practice. I learn best by building small, working things and documenting them clearly so that others can follow what I did. This portfolio is where I present that work in one place.

2. What I built in Activities 1–4

- **Activity 1 — VS Code setup (Hello World).** I installed and configured Visual Studio Code as my development environment and wrote and ran my first Hello World program, which confirmed that my tools worked end to end.
- **Activity 2 — Git & GitHub.** I set up my GitHub account and Git, and published my Hello World project in a repository named hello-world: <https://github.com/naikodisamiulla100-coder/hello-world>. This was my first experience of committing and pushing code to a remote repository.
- **Activity 3 — GitLens & Live Share (pair programming).** I installed GitLens to read a project's commit history and used VS Code Live Share to work on code together with a classmate in real time. I wrote up a collaboration log describing how we worked together and what I learned about shared coding sessions.
- **Activity 4 — LeetCode practice repository.** I created a leetcode-solutions repository to store my solutions and track my progress with short notes: <https://github.com/naikodisamiulla100-coder/leetcode-solutions>. It currently contains [10] solved problems in[C,C++,Python].

3. Skills

- **Tools:** Visual Studio Code, Git, GitHub, GitLens, Live Share.
- **Programming:** [C,C++,python] and basic problem solving with data structures and algorithms.
- **Working practices:** committing and pushing to repositories, reading commit history, pair programming, documenting my work, and writing prompts that give an AI assistant clear instructions.

4. Career / learning goal

[“My goal is to become a software developer, starting with strong fundamentals in programming and data structures, and to contribute to open-source projects before I graduate.”]

5. What the portfolio page must contain

- A one-page personal portfolio blog with these sections: About, Projects, Skills, Contact (plus short Coding Practice and Career Goal sections).

- Projects section: only my real work — the hello-world repository, the pair-programming collaboration, and the leetcode-solutions repository — each with a one-line description and a working link. No invented projects, awards or experience.
- About section: short and personal, three sentences at most, taken from Section 1 of this brief.
- Tone: professional but approachable, in the first person.
- Style: clean and simple, a calm blue-and-white colour scheme, easy to read on both mobile and desktop.
- Contact section: GitHub profile link and [naikodisamiulla100@gmail.com].

This brief is the source material for the generation prompt recorded in my Prompt Log.
